FARM MANAGEMENT SYSTEM

Full Project Report

This report presents the Farm Management System project documented in the supplied 21-page PDF. It organizes the readable headings and visible Salesforce setup details into a text-based report. Some small text in screenshots is not legible enough to transcribe reliably.

Table of Contents

1. Project Overview
2. Custom Objects
3. Tabs and Lightning App
4. Fields and Relationships
5. Profiles and Roles
6. Users
7. Sharing Rules
8. User Adoption and Record Entry
9. Reports
10. Dashboard
11. Summary and Source Limitations

1. Project Overview

The project is titled **Farm Management System** and is configured in Salesforce Lightning. The source document shows the creation and setup of custom objects, tabs, a Lightning application, fields and relationships, profiles, a role, users, sharing settings, records, reports, and a dashboard.

The application is organized around four custom objects: Farm, Crop, Farmer, and Buyer. These objects are surfaced through corresponding tabs and included as navigation items in a Lightning app named “Farm Management System.”

2. Custom Objects

The source shows four custom objects configured in Object Manager. Each object is shown with a deployed status and standard Salesforce object-management options.

2.1 Farm

Object label: Farm (plural label: Farms). The API name appears as **Farm__c**. The object detail screen shows reporting enabled, activities enabled, field history tracking enabled, and deployment status set to Deployed.

2.2 Crop

Object label: Crop (plural label: Crops). The API name appears as **Crop__c**. The object detail screen shows reporting enabled, activities enabled, field history tracking enabled, and deployment status set to Deployed.

2.3 Farmer

Object label: Farmer (plural label: Farmers). The API name appears as **Farmer__c**. The object detail screen shows reporting enabled, activities enabled, field history tracking enabled, and deployment status set to Deployed.

2.4 Buyer

Object label: Buyer (plural label: Buyers). The API name appears as **Buyer__c**. The object detail screen shows reporting enabled, activities enabled, field history tracking enabled, and deployment status set to Deployed.

3. Tabs and Lightning App

Custom tabs are shown for Farms, Crops, Farmers, and Buyers. The screenshots show custom tab definitions for these objects, with distinct tab styles/icons.

A Lightning application named **Farm Management System** is created through Lightning Experience App Manager. The navigation items shown as selected include Farmers, Farms, Buyers, and Crops. The application setup also includes app details and branding configuration.

4. Fields and Relationships

The source screenshots show the Fields & Relationships lists for each custom object. The tables below reproduce field labels and data types that are legible in the screenshots; some entries are standard Salesforce audit/ownership fields.

4.1 Farm object fields

Field label	Field/API name (visible)	Data type (visible)
Created By	CreatedById	Lookup (User)
Farm Name	Name	Text

Field label	Field/API name (visible)	Data type (visible)
Farm Type	Farm_Type__c	Picklist
Last Modified By	LastModifiedById	Lookup (User)
Owner	OwnerId	Lookup (User/Group)

4.2 Crop object fields

Field label	Field/API name (visible)	Data type (visible)
Created By	CreatedById	Lookup (User)
Crop Name	Name	Text
Crop Type	Crop_Type__c	Text (as shown)
Last Modified By	LastModifiedById	Lookup (User)
Owner	OwnerId	Lookup (User/Group)

4.3 Farmer object fields

Field label	Field/API name (visible)	Data type (visible)
Contact Number	Contact_Number__c	Phone
Created By	CreatedById	Lookup (User)
District	District__c	Picklist (controlling field: State)
Farmer Type	Name	Text (shown as Name)
Last Modified By	LastModifiedById	Lookup (User)
Owner	OwnerId	Lookup (User/Group)
State	State__c	Picklist

4.4 Buyer object fields

Field label	Field/API name (visible)	Data type (visible)
Address	Address__c	Text Area (255)
Buyer Name	Name	Text
Buyer Type	Buyer_Type__c	Picklist
Contact	Contact__c	Phone
Created By	CreatedById	Lookup (User)
Email	Email__c	Email
Last Modified By	LastModifiedById	Lookup (User)

5. Profiles and Roles

5.1 Profiles

The source shows Salesforce profile pages for “Sales Department” and “Farm manager.” These pages display profile details and assigned page layouts. The screenshot text indicates the Farm manager profile is associated with an Analytics Cloud Integration User; the exact permission settings are too small to transcribe completely.

5.2 Role creation

A role is created with the label **Farm Manager**. The role name is shown as **Farm_Manager**, and the “This role reports to” field is set to CEO. A subsequent role detail page displays the role as “farms manager” (as rendered in the screenshot) and shows no users assigned to the role at the time captured.

6. Users

The Users section shows a Salesforce user list and individual user detail pages. The screenshots include a user labeled “Farm Manager” and another labeled “Sales Department.” The captured user details show fields such as name, alias, email, username, nickname, role, user license, profile, active status, and locale/time-zone settings. Personal account values and small text are not reproduced in this report.

Two user-related activities are included in the source, but the captions do not specify further details beyond the screenshots.

7. Sharing Rules

The Sharing Settings screen displays organization-wide default access settings for several standard objects. A sharing rule is then configured for the Crop object.

The visible Crop sharing rule is named “crop” and uses criteria-based sharing. The criteria field is Crop Name, with the operator set to “equals.” The sharing target shown is the Farm Manager role, and the access level is Read/Write. The value field is not legible in the captured image.

The sharing settings list also shows a Buyer sharing rule and a Crop sharing rule. The Buyer rule appears to share with a public group and grants Read/Write access; the group name is not fully legible. No sharing rules are shown for Work Type or Farmer in the visible portion.

8. User Adoption and Record Entry

The User Adoption section shows a Farms list view titled “Recently Viewed” with four records. The visible record names are Shive Shanker, Gayathri, Janani, and Ramesh.

A record-entry dialog shows fields including Farmer Type, Contact Number, District, State, and Village, along with an Owner field. The form includes Cancel, Save & New, and Save actions. Values shown in the form are example data and are not transcribed here.

9. Reports

The Reports section shows a report builder for a report titled “Farmers with Farms.” The report preview contains columns labeled Farmer Type and Farmer Owner Name, with four rows corresponding to the records shown in the list view.

The report list shows three reports: “Buyers,” “Farmers with Farms,” and “Crops,” located in Public Reports. The report interface includes controls to create a new report, create a folder, save, close, and run a report.

10. Dashboard

A dashboard titled “Farmers with Farms” is shown in dashboard edit mode. A report component titled “Farmers with Farms” appears on the canvas, displaying Farmer Type and Farmer Owner Name. The dashboard editor shows controls for adding a widget, adding a filter, saving, and finishing the dashboard.

11. Summary and Source Limitations

The documented project configures a Salesforce-based Farm Management System around Farm, Crop, Farmer, and Buyer custom objects. It adds custom tabs and a Lightning app, defines fields, sets up profiles and a Farm Manager role, configures users and sharing rules, and includes example records, reports, and a dashboard.

This report is based on the supplied PDF’s visible headings and screenshots. It does not invent missing field values, relationships, permission details, or sharing criteria. Some screenshot text is too small or unclear to verify, and those details are explicitly left unspecified.

Prepared from the supplied project PDF.
